

## **Mobile Programming – Project MS #1**

Submit a document which describes your android application project.

The document should include:

1. Application's purpose
2. Main functionalities
3. User stories

Describe the application from the user's point of view, what can he do with the application, how can he use it and when. It should contain an abstract description about the Activities of the application, interfaces between the application users, interfaces with 3<sup>rd</sup> party such as other applications on the device or other servers that the application communicate with etc.

### **4. Application pre-requisites**

Basically every assumption that that you will take regarding to your application's users and any other 3<sup>rd</sup> party issues, for example:

- Will the application depend on special hardware such as camera, GPS, specific button on the device?
- Will the application consist on data from a 3<sup>rd</sup> party provider?
- Will the user need specific account such as a Facebook account?

### **5. Flow description**

Given the user stories and main functionalities you should create an abstract description of the application's technical flow, according to this section you will write the project's MS #2, which is a detailed design of your application.

- The MS #1 paper does not require that you will include all of these 5 sections but should refer to them in some way.

- The purpose of this paper is for you as developers, to understand what your application goals are, and to get an abstract description of the application.
- Please write the document in English.

- The assignment should be assigned as a \*.doc/\*.docx file
- The file name should be MS1\_<ID>\_<ID>.doc
- The assignment will be submitted in the course web site in the appropriate folder
